

1. GENERAL RELATIONSHIPS AND TECHNIQUES

APPENDIX A1.4.4
Crystallographic space groups in reciprocal space

Table A1.4.4.1. Crystallographic space groups in reciprocal space

The table entries are described in detail in Section 1.4.4.1. The general format of an entry is

$$(n)\mathbf{h}^T\mathbf{P}_n : -\mathbf{h}^T\mathbf{t}_n$$

or

$$(n)\mathbf{h}^T\mathbf{P}_n ;$$

according as the phase-shift part of the entry is nonzero or zero modulo 2π , respectively.

Notes:

(1) For centrosymmetric space groups with the centre located at the unit-cell origin only those entries are given which correspond to symmetry operations not related by inversion. If the origin in such space groups is chosen elsewhere, all the entries corresponding to the operations of the point group are presented.

(2) For trigonal and hexagonal space groups referred to hexagonal axes the Miller–Bravais indices hkl are employed, and for the rhombohedral space groups referred to rhombohedral axes the indices are denoted by hkl (cf. *IT* 1, 1952).
