

3. METHODOLOGY

data is very likely to be an additional factor in the improved accuracy.

This chapter is based on an article *Accuracy in Rietveld quantitative phase analysis: a comparative study of strictly monochromatic Mo and Cu radiations* by León-Reina *et al.* [(2016), *J. Appl. Cryst.* **49**, 722–735]. The work was supported by Spanish MINECO through BIA2014-57658-C2-2-R, which is co-funded by FEDER, and BIA2014-57658-C2-1-R research grants. Funding from Junta de Andalucía (grant P11-FQM-07517) is also acknowledged. We thank CELLS-ALBA (Barcelona, Spain) for providing synchrotron beam time on the BL04-MSPD beamline. All raw powder-diffraction data files underlying this work can be accessed at Zenodo at <https://doi.org/10.5281/zenodo.1291900> and used under the Creative Commons Attribution license.
